DETAILED ACTION

Response to Amendment

1. Applicants' amendment, filed June 08, 2007, to claim 5 overcomes the rejection under 35 U.S.C. 112, second paragraph to said claim. Thus, the Examiner withdraws the rejection.

Response to Arguments

2. Applicants' amendment and arguments, filed June 08, 2007, traversing the rejection of claims 1-8 and 13-18 under 35 U.S.C. 102/103 have been considered and found persuasive. Thus, the Examiner withdraws the rejection.

Claim Objections

3. Claims 2 and 6 are objected to under 37 CFR 1.75 as being a substantial duplicate of claim 1 as now amended. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 1621

5. Claims 13-15 and 17 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US Patent Application Publication No. 2004/0077714 A1. The '714 patent application publication discloses metal complexes of alpha amino dicarboxylic acid useful in animal nutrition. The 714 patent application publication particularly discloses the corresponding metal complexes of glutamic and aspartic amino acids. See Page 7, Tables 1 and 2.

Allowable Subject Matter

6. Claims 16 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

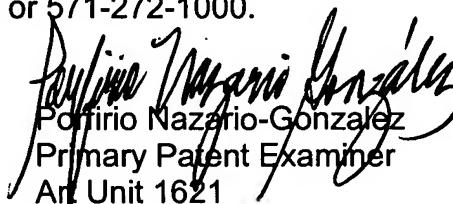

7. Claims 1, 3-5, 7-12 and 19 are allowed.
